Exception Handling:

Q1. Create a class called BankAccount which has datamembers like AccountNumber,Name,static double balance where minimum balance should be 500,transaction type(d/c) and transaction amount.

Create a user defined exception called CheckBalanceException.

If the balance in the account is below 500 on performing withdrawal operation it should throw CheckBalanceException.

Q2.Martin wants to create a ticket booking application for a movie theater. The application should ask the user for his choice, whether he wants to book the tickets or not. The application should also ask the user for the total number of tickets to be booked. While booking the tickets if the total number of booked tickets exceeds the available tickets, the application should raise an exception. Assume the total number of available tickets is 15.
